Allowable Subject Matter

1. Claims 25, 27-45, 51-58 and 70-84 are allowed.
2. The following is an examiner's statement of reasons for allowance:

[Claim 25]: A signal processing apparatus comprising: a signal acquiring unit configured to acquire second signals of a second dimension by projecting first signals as real-world signals of a first dimension on a sensor and by detecting the mapped signals by said sensor, said second dimension being lower than said first dimension; and a signal processor configured to extract significant information, buried by said projection from said second signals, by performing signal processing which is based on said second signals, and adjust distortion produced by projection according to the significant information, wherein a projecting period for acquiring the second signal is divided into at least two equal time periods according to a number of movement quantities upon acquiring the second signal, signals obtained in each of the equal time periods being used to generate the significant information.

[Claims 51-53]: The reasons for allowance for these claims are similar to claim 25.

[Claim 70]: A signal processing apparatus for processing a predetermined number of detection signals acquired by a sensor made up of a predetermined number of detection elements having time integrating effects, said signal processing apparatus comprising: an area specifying unit configured to specify a foreground area made up only of foreground object components constituting an foreground object, a background area made up only of background object components constituting a background object, and a mixed area mixed from said foreground object components and the background object components; a mixing ratio detector configured to detect a mixing ratio of said foreground object components and said background object

components at least in said mixed area; and a separating unit configured to separate said mixed area in units of a pixel into said foreground object component and said background object component based on the specified results by said area specifying unit and said mixing ratio wherein a detecting period for acquiring the predetermined number of detection signals is divided into at least two equal time periods according to a number of movement quantities upon acquiring the predetermined number of detection signals, signals obtained in each of the equal time periods being used to generate the mixing ratio.

[Claims 72-74, 78-80, 83 and 84]: The reasons for allowance for these claims are similar to claim 70.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
